

Deep Excavations (In-House/Refresher)

This course will provide engineers with the knowledge and understanding required to monitor and inspect excavation works that are carried out for the purpose of laying, repairing and modifying utility assets that are installed up to a depth of 2.5 meters.

Duration: 1 Day

Course Space: 8 Trainees

Method of Delivery: Trainer Led

Who is this for? All utility operatives who are required to undertake work in or around deep excavations. Managers and supervisors would also benefit from attending this course.

Course Objectives:

- State the current legislation and company procedures
- State the causes of trench collapse
- Explain the different methods of trench support
- Design a safe system of work and applying the principles of SCO permits
- Inspect existing installations of various trench support systems.

Accreditation

In-House certificate only

Technical Information

Date Produced: April 2026

Pre-requisite Qualifications: No previous qualifications required. However, it is best that those sitting this course have an understanding of the utility industry

Assessment Type: Multi Choice question papers and practical assessment
